

# ASSIGNMENT 1

The systems challenge we hope to tackle is:

Why does Waste Management (Reduce, Reuse, Recycle) not work in the Philippines?

Because:

Our team is comprised mostly of locals (and friends) and doesn't like the current situation and thus wishes to make a sustained change to the living environment and standards.

Visualize your complex challenge.

Show us a visual representation of why your challenge is so complex. This doesn't have to be perfect—just start to get creative. You can take a picture or illustrate some aspect of your challenge (stick figures are fine!). The goal is simply to visualize some element of your complex social challenge so that other teams can see what you are working on.
